

KIMBELL ART MUSEUM RENZO PIANO BUILDING

FORT WORTH, TEXAS

CHALLENGE:

Diffuse natural light from glass ceilings with bays in lengths of 100 feet.

SOLUTION:

A straight forward solution of utilizing a custom sheer fabric to filter light and create visually striking luminous bays. AEC worked closely with the metal fabricator to incorporate a slim mounting track profile within a custom metal frame. No mechanical fasteners were used. Instead, a high strength tape held the track to the frame. The panels are light diffusing pieces of art that keeps the focus on the displayed art work.

PRODUCTS UTILIZED:

Clipso Track, Custom Sheer Fabric, Custom Designed Metal Frames
