

FAQS

CLIPSO

What is a stretched fabric system?

- Stretched fabric systems are fabricated on-site, consisting of a track, core, and finish material. A stretched fabric system is a versatile acoustic solution for a wide range of projects.

Are stretched fabric systems acoustic?

- Yes. With a typical NRC rating of 0.8-0.9, stretched fabric systems deliver an effective acoustic solution that is easy to retrofit or repair if needed.

Can custom colors, prints, or fabrics be used?

- Absolutely. Clipso offers a wide range of custom colors and printed graphic options.

Are stretched fabric systems removable or accessible?

- Yes. We can install an access panel, allowing access to lighting, HVAC, or infrastructure behind the surface.

Can I incorporate lighting with this system?

- Yes! Stretched fabric systems can work around existing lighting features. Clipso is often backlit to create ambient lighting in interior spaces.
