

FAQS

GLASS / MARKER BOARDS

Are there standard sizes of the glass whiteboards?

- The most common sizes are 4'x6' and 4'x8'. However, custom sizes are available. The boards can be installed with a vertical or horizontal orientation.

Can I cover an entire wall?

- Yes. Wall-to-wall options are available to maximize your workspace.

Can I print any images, text, or logos on the boards?

- Absolutely. Text and/or imagery can be printed on the boards to create a unique design.

Do you install the glass boards before or after the wall behind it is finished?

- We can do it both ways. AEC can install boards on top of finished drywall or acoustic panels, which may or may not require blocking. We can also install early to ensure acoustic paneling fits around the boards, so the result is a completely flush surface on the wall.

Do the boards have to be white or are there other color options?

- While white is the most common, boards can be any color to fit your space.

I have a questions about a specific glass/marker board product. Who do I contact?

- AEC does not manufacture glass boards - we simply install them. For specific product questions, please contact the product manufacturer rep directly.
