

FAQS

PREFABRICATED FELT & PET PRODUCTS

What are acoustic clouds and baffles used for?

- These products reduce reverberation and echo in spaces with exposed ceilings, while adding a strong visual design element.

Can these systems be customized in size, shape, or color?

- Yes. Acoustic clouds, baffles, and panels can be fully customized to meet design intent and performance goals. There are many brands + options to choose from (see logos on our product page).

Are these solutions suitable for open or exposed ceilings?

- Clouds and baffles are ideal for open ceilings where traditional acoustic treatments aren't possible. However, they can also be installed with enclosed attached to enclosed/finished ceilings (drywall, fabric, etc.) to absorb sound and add visual interest.

Do you handle layout coordination and installation?

- Yes. We can assist with layout coordination and will handle field measurements and professional installation.

I have a questions about a specific prefabricated acoustic product. Who do I contact?

- AEC does not manufacture felt or PET products - we simply install them. For specific product questions, please contact the product manufacturer rep directly.
